SUMMARY

Security researcher and final-year B.Tech (Cyber Security) with a **validated real-world track record: \$400 USD bug bounty awarded via HackerOne**, with responsible disclosures across severity classes **P4 → P2** (actively pursuing P1/critical). Seven professional certifications including CompTIA Security+, CySA+, PenTest+, and Network+. Hands-on SOC operations, vulnerability assessment, and penetration testing using Burp Suite, Nmap, Metasploit, Wireshark, Kali Linux, and Wazuh SIEM. Working knowledge of OWASP Top 10, OWASP API Security Top 10, CVSS, CWE, and MITRE ATT&CK. Strong Linux administration, TCP/IP networking, and Python/Bash automation.

BUG BOUNTY & SECURITY RESEARCH

- HackerOne Bug Bounty (2026):** awarded a **\$400 USD bounty** for a responsibly disclosed web application vulnerability — validated, real-world security research beyond lab practice.
- Active bug bounty hunter** across public programs: identified and reported vulnerabilities spanning **P4 (informational) → P2 (high)**; continuously hunting for **P1 (critical)** findings.
- Live-target methodology:** reconnaissance & subdomain enumeration, Burp Suite interception/fuzzing, OWASP Top 10 & API security testing, CVSS-based severity scoring, and professional responsible-disclosure reporting.

CERTIFICATIONS

- | | |
|--|--|
| CompTIA Security+ · Aug 2025 | CompTIA CySA+ · Aug 2025 |
| CompTIA PenTest+ · Aug 2025 | CompTIA Network+ · Aug 2025 |
| QuickHeal Certified Malware Analyst · Dec 2025 | QuickHeal Digital Forensic Investigator · Jan 2025 |
| CS50 — Harvard University · 2024 | |

CORE SKILLS

- | | |
|--|--|
| Offensive Security & VAPT: Burp Suite, Nmap, Metasploit, Wireshark, Kali Linux, OWASP Top 10, OWASP API Security, Fuzzing, Reconnaissance | SOC & Detection: Wazuh (SIEM/EDR), Log Analysis, Threat Detection, Incident Response, Alert Triage, Security Monitoring |
| Frameworks & Standards: CVSS, CWE, MITRE ATT&CK, Responsible Disclosure, Security Policies & Compliance, ISO-style Documentation | Linux & System Admin: RHEL, Ubuntu, Kali; System Hardening, User/Process Management, Service & Performance Management |
| Networking: TCP/IP, DNS, DHCP, VPN, VLAN, Firewall Concepts, HTTP/HTTPS, Packet Analysis | Automation & Dev: Python, Bash, JavaScript, REST APIs (FastAPI), SQL, Git, Docker, Ansible |

EXPERIENCE

- | | |
|--|--------------------|
| Zentoja Technologies Private Limited
Technical Lead (Cyber Security) · Remote | Jan 2026 – Present |
| <ul style="list-style-type: none">Lead vulnerability assessment, risk identification, and remediation tracking; report findings with CVSS-based severity scoring.Perform threat analysis, log review, and incident monitoring to proactively detect and respond to security events.Established cybersecurity policies, security standards, and best-practice documentation; developed security awareness resources for internal teams. | |

PROJECTS

- | | |
|---|--------------------|
| IDS Defense – SOC-Grade ML Intrusion Detection | Jan – Mar 2026 |
| <ul style="list-style-type: none">Developed a real-time intrusion detection system with ML-based anomaly detection and live SOC dashboards.Implemented XGBoost models with WebSocket streaming to detect DDoS, SQL injection, and brute-force attacks.Integrated a high-volume network log ingestion pipeline to provide continuous visibility for SOC analysts. Technologies: Python, XGBoost, FastAPI, Next.js · github.com/ganeshkrishnareddy/IDS-Defense | |
| MailShield – AI-Powered Phishing Defense | Aug – Dec 2025 |
| <ul style="list-style-type: none">Built an automated phishing detection system performing email and URL analysis targeting enterprise spam-filter gaps.Engineered URL reputation checks and header anomaly detection to identify zero-day phishing campaigns.Applied heuristic-based AI analysis with sandbox validation for real-time threat classification and alerting. Technologies: Python, AI/ML Heuristics, API Security · github.com/ganeshkrishnareddy/mailshield | |
| CRAG – AI Vendor Risk Monitoring | Apr 2026 – Present |
| <ul style="list-style-type: none">Built an AI-powered third-party vendor risk monitoring prototype with real-time risk scoring (0–100) and automated alerts.Implemented RBAC for Admin/Vendor views, APScheduler-driven dynamic scoring, and a compliance audit log.Designed a live glassmorphism dashboard with Chart.js visualizations for continuous vendor risk visibility. Technologies: Python, FastAPI, SQLAlchemy, Chart.js, Firebase · github.com/ganeshkrishnareddy/CRAG | |

ACHIEVEMENTS

- \$400 USD HackerOne bug bounty** for a responsibly disclosed web application vulnerability (2026).
- Awarded the **Reliance Foundation Scholarship** worth Rs. 2,00,000 for academic excellence in engineering.
- Recognized as **Best Freelancer of 2024** by IPSE.
